

Software That Fits

AccountMate is a real-time, customizable financial and business management software designed to address the needs of small to medium-sized businesses. It takes advantage of the speed of client/server technology and the latest productivity-enhancing tools in Microsoft's suite of products to help you better manage your business.

This leading-edge application combines the full functionality of our award-winning AccountMate system with the power of Microsoft's SQL Server. It offers AccountMate users enhanced investment protection for the long haul with superior scalability, up-time performance, stronger data security and easier integration with other software applications. A SQL database also optimizes the application's performance so users can experience uniform high-speed performance – no more system slowdown at the end of your reporting period.

AccountMate 10 for SQL or Express Manufacturing Configurator Module

Complex Bills of Materials are Simplified

Manufacturing Configurator is a program that allows companies to develop and enforce ordering rules for the products they manufacture. It confirms that all bills of materials entered into AccountMate include only products that the company can deliver. For example, if a company builds multiple lines of garage doors, but one line is only available with certain glass styles, every bill of materials for that door can only be created with appropriate glass choices. This is true for every element of the garage door, from door size to available paint options.

By enforcing configuration rules, the person generating a bill of materials requires substantially less experience and training.

Step	Type	Component #
1	Labor	ASSEMBLY 3
1	Inventory	BRACKET
1	Inventory	TABLE LEGS A11B
1	Inventory	TABLE TOP A11A
2	Labor	FINISH LABOR
2	Labor	PAINTER
2	Inventory	STAIN & VARNISH

Bills of Materials can be Generated from the Manufacturing Configurator

Time Savings, Improved Customer Satisfaction and Increased On-time Shipments

The result is that bills of material are generated correctly the first time and every time. Time will be saved because every product can be assembled as ordered. Customer satisfaction will improve and wasted expenses from improperly specified orders will be eliminated. This can also lead to a greater percentage of on-time shipments.

These options can be items (i.e. specific color), sizes selected from a list, or sizes typed within an acceptable range (i.e. between 18" and 28").

Increased Productivity When Both Sales and Manufacturing Configurators Installed

If both Sales Configurator and Manufacturing Configurator

are installed, configurations generated in Sales orders can be passed to manufacturing to become work orders without rekeying any redundant information and will save more time.
